

EnviroLube™ LEED Point Contribution

An in-depth study and review of the **EnviroLube™** product toward LEED point contribution was conducted by Brightworks Sustainability Advisors, an independent third party. Below is the summary of how Integrated Lube Services' product **EnviroLube™** can help building owners and their project teams achieve **LEED Certification**. A comprehensive and detailed report describing the approach and summary of findings is readily available by following this link:

<http://integratedlubeservices.com/LEED-Product-Analysis.pdf>

- **Materials & Resources Credits 4.1 and 4.2 - Recycled Content 10% and 20% (*post-consumer + 1/2 pre-consumer*)**
EnviroLube™ contains 10.8% pre-consumer recycled content (by weight) found in the steel, supporting achievement of the LEED Recycled Content credit.
- **Materials & Resources Credit 6 - Rapidly Renewable Materials**
EnviroLube™ contains 7% rapidly renewable content, which is found in the Ashland, Inc. ENVIREZ resin liner. The ENVIREZ line of unsaturated polyester resins is comprised of rapidly renewable materials such as soy, vegetable oils and other bio-derived glycols.
- **Indoor Environmental Quality Credit 4.1 - Low Emitting Materials: Sealants and Adhesives**
EnviroLube™ uses only RTV Silicon sealant during manufacturing and during product installation on site, and is classified by the SCAQMD as a Construction Adhesive. RTV silicon has a VOC amount of 32 grams per liter. The LEED maximum VOC limit for Construction Adhesives is 50 grams per liter; therefore EnviroLube's RTV silicone is well under the LEED threshold.
- **Indoor Environmental Quality Credit 6.1 - Controllability of Systems: Lighting**
EnviroLube™ provides local and accessible lighting system controllability for multi-occupant usage within the bay, therefore actively supporting the achievement of this credit.

We hereby certify that based on the information provided to us, the LEED information presented herein is factually accurate.
